Letter of Support for EIC Pathfinder Project Proposal – HEART4KID

Dear EIC Evaluation Committee,

We are pleased to support the consortium's application to the EIC Pathfinder programme for the project HEART4KID, which is focused on the development of an artificial heart for the paediatric population with cardiac conditions, including congenital heart disease.

Based on our understanding of the initiative, we believe this proposal addresses a significant unmet clinical need in paediatric cardiovascular care and demonstrates strong potential for scientific and technological advancement.

We believe HEART4KID has the potential to strengthen Europe's position in paediatric cardiovascular innovation by integrating clinical expertise with advanced engineering and biomaterial sciences. The project could help accelerate the translation of emerging technologies into clinically viable solutions for children with heart failure and congenital heart disease.

Should the project receive funding, we would welcome the opportunity to explore how our organisation could contribute to the initiative in areas aligned with our expertise and clinical role.

This letter expresses our support for the submission of the proposal and does not constitute any formal commitment at this stage.

Prof. Dr. med. F. Berger
